Personal Portfolio Web Application

ALI ALORYD

Introduction

Project Objective

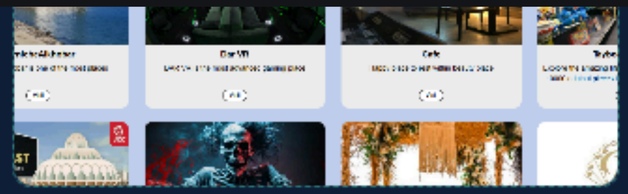
Develop a professional portfolio web application that combines all Web Engineering course concepts into one complete and polished project.

Personal Motivation

Create a real portfolio website that can be used professionally beyond the course, while improving frontend development, debugging, and software design skills.

Main Goal

Transform a simple portfolio website into a production-ready application that is responsive, deployable, and professionally documented.



KHARJAA

Tourism platform for planning group trips and camping experiences.

Core Features

- Core Features
- Responsive portfolio website
- Dark / Light mode toggle
- Dynamic navigation
- Resume PDF integration
- Project cards with filtering
- Expandable “Show Details” system

Advanced Features

- Advanced Features
- GitHub repositories section using GitHub API
- Smart Contact Form using EmailJS
- Automatic confirmation workflow
- Error handling and validation
- Mobile optimization

Resume
Hi, my name is
Ali Aloryd.
I turn ideas into functional systems.
Senior Software Engineering student at KFUPM and First-Honor Graduate in Computer Information Technology from DCC. Passionate about building structured, maintainable web applications with clean UI architecture and purposeful JavaScript interactivity.
Start by exploring my projects using the filter dropdown. Click “Show Details” on any project to view more information. Visit the GitHub section to see my latest repositories, or use the contact form to send me a message directly.

Challenges, Solutions & AI Integration

Most Challenging Parts (Resolved)

- GitHub API integration
- Card expansion bug
- Mobile responsiveness issues
- Contact form workflow using EmailJS
- Theme persistence using localStorage

Unresolved / Planned Future Work

- Backend database integration
- Full authentication system
- Admin dashboard
- Analytics system

AI Integration

- ChatGPT → debugging
- Base44 → UI/UX improvements
- Claude → code refinement

Results & Future Improvements

What Was Achieved

- Fully functional deployed portfolio website
- Professional-quality documentation
- Clean code structure
- Strong responsive design
- Real-world production-ready improvements

What I Learned

- API integration
- Frontend debugging
- Professional project structure
- AI-assisted development workflow
- Responsive UI architecture

Future Improvements

- Full-stack backend integration
- Admin dashboard
- Blog system
- Analytics dashboard

thank you
